PROFILE

Aspiring Full-Stack Web Developer skilled in **HTML, CSS, Bootstrap, PHP, MySQL, and Laravel**. Experienced in building responsive front-end websites and developing full-featured CRUD applications following MVC architecture. Completed internship work and multiple real-world projects, including Laravel CRUD applications, e-commerce systems, and responsive web designs. Passionate about writing clean, scalable code and continuously expanding my technical skills.

PERSONAL PROJECT/S

Project Name : PERSONAL PORTFOLIO

Project Url : <https://tinyurl.com/28vx74kt>

Github link : <https://tinyurl.com/2aqoclfn>

Description : Built a clean, responsive portfolio to showcase skills, projects, and experience.

Project Name : E-Commerce Website (PHP & MySQL)

Github link : <https://tinyurl.com/22ttgfhf>

Description : Built a fully functional e-commerce platform using PHP and MySQL with a focus on secure user authentication and smooth shopping experience. Developed role-based registration and login system (Customer, Vendor, Admin) with email verification, password reset, and session-based authentication. Implemented complete product management for admins, including adding/editing/deleting products, managing categories/subcategories, attributes, prices, images, and stock. Added product search and advanced filtering features (price, category, brand) for better user navigation. Designed a dynamic shopping cart system with add/remove items, quantity updates, and coupon/discount application. Built order management functionality for admins, including viewing orders, updating statuses (Pending, Shipped, Delivered), and handling cancellations. Created inventory management system with automatic stock updates and low-stock alerts for admin. Added customer review and rating system with admin moderation

Project Name : Resturant Table booking System

Github link : <https://tinyurl.com/2bqaza6z>

Description : **Restaurant Table Booking System** - Developed a full-stack web application that enables users to search for restaurants and book tables online, streamlining the reservation process and reducing manual handling. The system features dynamic search and booking pages, status checking, and responsive design, built using PHP, JavaScript, and MySQL for efficient data handling. This project demonstrates practical skills in web development, database integration, and user interaction design.

from **WEBSKITTERS ACADEMY**

Project Name : Employee Management System

Project Url :

Github link : <https://tinyurl.com/29vlny59>

Description : Built a Laravel web application for employee management featuring role-based authorization. Admin users can securely create, update, and delete employee records, while access for non-admin users is restricted. Utilized Laravel authentication, middleware, and Eloquent ORM for secure and efficient database operations.

Project Name : Small Customer Relationship Management System using PHP

Github link : <https://tinyurl.com/23jclkk4>

Description : **CRM - Customer Relationship Management System** - Built a web-based CRM application that enables businesses to manage customer interactions, track tickets/quotes, and maintain user profiles through a centralized platform. The project demonstrates skills in full-stack web development using PHP, JavaScript, CSS, and database handling, focusing on improving customer service workflows and data organization.

Project Name : Blogify - A blog management System using Laravel

Github link : <https://tinyurl.com/26n8uqmg>

Description : **Blogify - Role-Based Blogging Platform** - Developed a production-ready blog management system using the Laravel framework, featuring separate workflows for Users, Authors, and Admins with secure authentication, role-based access control (RBAC), and modern UI templates. The project showcases clean architecture, scalable Laravel best practices, and real-world blogging functionality like post creation, editing, and management.

Project Name : VisitTrack - A Laravel visitor management system

Github link : <https://tinyurl.com/273wly3x>

Description : **VisitTrack - Visitor Entry Management System** - Built a web-based visitor management application using the Laravel framework to replace traditional manual registration with a secure, digital workflow. The system includes features such as visitor sign-in, admin approval, OTP-based verification, and real-time entry tracking to streamline visitor handling for businesses and organizations.

EXPERIENCE/S

 25/08/2025 - 25/09/2025

Company : Webskitters Technology And Solutions

Designation : Software Developer Internship

Description : Developed a full-featured CRUD (Create, Read, Update, Delete) application using Laravel, adhering to MVC architecture and industry best practices in backend development.

- Executed CRUD operations leveraging both Query Builder and Eloquent ORM, showcasing expertise in diverse database interaction techniques.
- Designed and implemented intuitive user forms with Blade templating, incorporating Laravel validation for secure input handling and robust error management.
- Integrated essential features including pagination, dynamic search, update forms, delete actions, and flash messaging to enhance user experience and application responsiveness.
- Structured clean, modular, and reusable code through efficient

scalability and long-term maintainability.
